

Product features

- ❑ Independent adjustment of Max and BIAS.
- ❑ Down-opened Panel, easy for fuse replacement.
- ❑ VR of Max and SFS are installed in the front panel, easy for adjustment.
- ❑ Multi-LED display panel makes the operating condition clear.
- ❑ The auxiliary powers (AC1, AC2) are independently controlled for all models.
- ❑ Build-in buffering output adjustment (SFS VR), adjusting range 1~22 seconds. (Only for the phase control product)
- ❑ Top & bottom shielding covers are designed for safety and fashion out looking, also easy for wiring installation.
- ❑ In case of 0.5 Hz sudden power losses, system output can be switched off immediately. Once the power is restored, the system will buffer the output to prevent the voltage surge for fuse burn-down.
- ❑ Main power is one spec. Design for 200~480VAC.
- ❑ Automatic power frequency detection for 50~60 Hz. No need for selection or switch.
- ❑ Automatic detection and display for power out-of-phase, SCR overheating, and fuse burn-down with one set of alarm dry contact output.
- ❑ In cases of SCR overheating or fuse burn-down, the system output is stopped immediately. Once the malfunction is eliminated and power is restored, the system will buffer the output to prevent the fuse burn-down.
- ❑ 4~20mA, 1~5VDC, 2~10VDC, 0~20mA, 0~5 VDC, 0~10VDC, dry contact points, etc. and all control signals are ready to use.
- ❑ Triggering circuit and the main board are designed separately to avoid the main board damage when main circuit malfunctions.
- ❑ Using European detachable control signal connector for easy replacement without re-wiring installation.

Outline descriptions

Installation and ambient conditions

- ❑ When the power regulator is operating, the heat will be generated automatically. Please install the system vertically and leave some empty space on two sides to avoid the temperature inside the regulator rising continuously.
- ❑ There must be some ventilation holes on the control box. Please follow the principle of hot air rising to install the ventilation holes or extra cooling fans.
- ❑ Please avoid installing the regulator in the place with high temperature or poor ventilation. Otherwise, the maximum operating capacity must be set lower than 70% of the nominal capacity.
- ❑ Avoid installing the regulator in the places with heavy water evaporation, acid, alkaline, or corrosive air.
- ❑ Ambient humidity: below 90%RH (no condensation)
- ❑ Ambient temperature: -10°C~45°C

※ The above numbers are based on the conditions of no erosion, no greasy dirt, and no cover on the heat sink and following the recommended installation guides based on the principle of heat transfer.

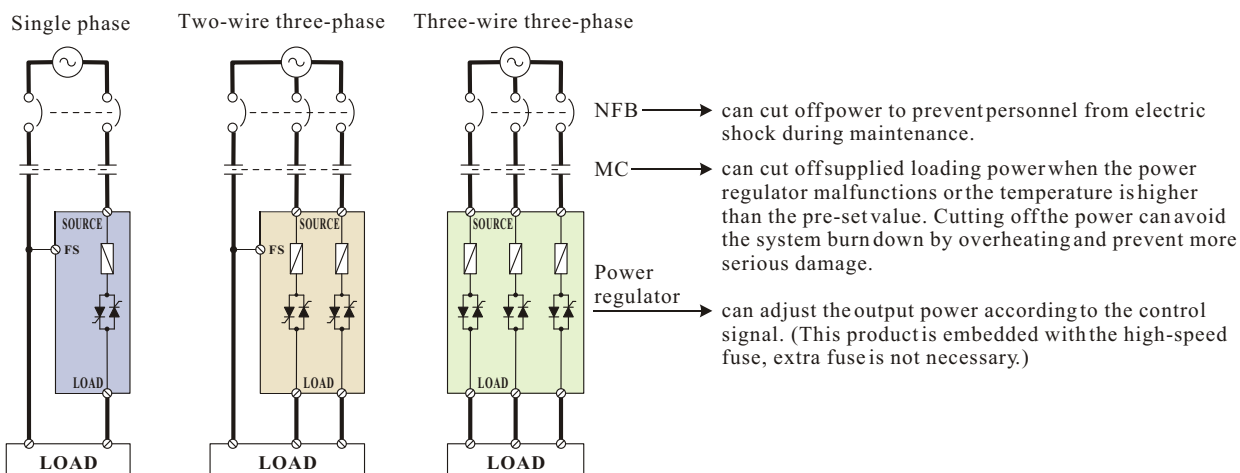

Control and applied loading

<div>輸出量 Output</div> <div>控制方式 Control mode</div>	輸出波形 Output wave		
	10% Output	50% Output	90% Output
相位控制 Phase angle control			
零位控制 Zero crossing control	 1 cycle ON and 9 cycle OFF	 1 cycle ON and 1 cycle OFF	 9 cycle ON and 1 cycle OFF

- Phase angle control:** continuous phase angle control, steady output, current gauge reading remains steady.
 But, every half wave will produce harmonic wave.
 Applicable loading: fixed resistance loading, variable resistance loading, inductive loading, IR light bulb.
- Zero crossing control:** distributed zero crossing control, minimum resolution 1 Hz, no harmonic wave, and current gauge reading oscillates.
 Applicable loading: fixed resistance loading.

Wiring and setup notices

- Standard main circuit setup:** main power → molded case circuit breaker → contactors → power regulator → loading.
- The screw must be tightened during the wiring setup to avoid high temperature resulting from bad contact.
- Once the wiring setup is completed, the front panel and safety cover must be properly installed before the system is powered up to avoid the electric shock or short circuit caused by dropped conductive objects.

Model table

Product series	W5	W5 series	
Control	SP	Single-phase angle control	
	SZ	Single-phase zero crossing control	
	TP	Three-wire three-phase angle control	
	TZ	Two-wire three-phase zero crossing control	
	ZZ	Three-wire three-phase zero crossing control	
Main power voltage	1V	110VAC (Only for single-phase power source)	
	4V	200~480VAC	
Normal rated current	030	30A	
	045	45A	
	060	60A	
	080	80A	
	100	100A	
	125	125A	
	150	150A	
	180	180A	
	230	230A	
	300	300A	
	380	380A	
	450	450A	
	580	580A	
	720	720A	
Dash		-	
Auxiliary power source code		1	1 ϕ 110VAC
		2	1 ϕ 220VAC
Input signal code		0	0~5VDC
		1	1~5VDC
		2	2~10VDC
		3	0~10VDC
		4	4~20mA
		5	0~20mA
		M	Manual adjustment
Buffering time code		*	Special
		C	Buffering time 2 seconds (Zero-crossing type product)
Special code		J	Adjustable buffering time, 1~22 seconds (Phase-angle type product)
		TF	Inductive reactance type loading
		CL	Limited current type
		CV	Fixed voltage type

Selection of the input signal

Selection S1 Input signals 4~20mA、0~20mA、MANUAL

Selection S2 Input signals 1~5VDC、0~5VDC

Selection S3 Input signals 2~10VDC、0~10VDC

Functional adjustment

- VR1 BIAS : Standard output voltage adjustment.
(Counter-clockwise adjust the control signal, lower the input will produce the output.)
- VR2 SFS : Buffer rising time adjustment.
(Adjusting range 1~22 seconds, clockwise adjustment will increase the time. No applicable for zero crossing type product.)
- VR3 Max : Maximum output voltage adjustment.
(Adjusting range 0~100%, counter-clockwise adjustment will decrease the output. Set to zero will have no output.)

Descriptions for LED lights and trouble shooting

L1 Power Power light	On: Auxiliary power on. Off: 1. Auxiliary power sources have no output → make sure AC1, AC2 auxiliary power sources have power output. 2. Control board malfunction → please replace the same spec. control board or send the power regulator for maintenances.
L2 Input Input light	On: Control input signal is in. Off: 1. Control signal is not in → please check the temperature gauge to see if there is input, check the connection and the wiring. 2. Wrong connection on the electrodes of the control board → check the electrodes of the temperature gauge. 3. Set to zero on the Max VR of the control board or outside VR → check two VRs to see if any one of them is set to zero. 4. Control board malfunction → please replace the same-spec. control board or send the power regulator for Maintenances.
L3 Output Output light	On: Power regulator is in output $\left\{ \begin{array}{l} \text{phase angle control. (light and dark based on the output.)} \\ \text{zero crossing control. (flash based on the output.)} \end{array} \right.$ Off: 1. If the abnormal light L5 is on. (fuse burn down or main power has no output.) → please refer to ERR (L5). 2. If the temperature light L4 is on. (power regulator is overheating.) → please refer to TH (L4). 3. If the input light L2 is off. (No input signal.) → please refer to IN (L2). 4. If the input light L2 is on. (control board malfunction.) → please replace the same spec. control board or send the power regulator for maintenances.
L4 TH Err Temperature light	On: 1. Power regulator is overheating → cooling fan is not operating, check the power, fan damage, or if the fan is stuck by any object and get rid of it if necessary. 2. Bad ventilation or the ambient temperature is too high → please change the installation place or improve the ventilation. Off: Normal, power regulator is not overheating.
L5 FUSE/ Source Err Power source abnormal light	On: 1. Main power source have no output or out-of-phase → check the power output and all the abnormal conditions. 2. High-speed fuse burn down → please replace the same spec. fuse and check the shortage and the ground of the loading before restoring the power. Off: Normal

Descriptions of the connectors

Single phase, Single phase zero crossing, Two-wire three-phase zero crossing (SP、SZ、TZ)

Connector pin	Connector No.	Description	Notes
TB-01	FS	Detection of the fuse burn down	The connection from power to loading must be connected back to the FS side.
TB-02	M	+5VDC	Only for this control board, not for other use positive control signal input.
TB-03	+	Positive control signal input	The default setting is 4~20mA when the sticker is not marked.
TB-04	—	Standard analog signal voltage	
TB-05	E3	Connected to the VR 3rd pin of the outside potentiometer	Adjustable output 0~100%, Please eliminate the shorted copper wire between E3 and E2 when using the outside potentiometer with VR. (2~10KΩ)
TB-06	E2	Connected to the VR 2nd pin of the outside potentiometer	
TB-07	E1	Connected to the VR 1st pin of the outside potentiometer	
TB-08	NC	Alarm connector output (normal close)	227VAC2A. Connector capacity 125VAC2A. 30VAC2A.
TB-09	COM	Alarm connector output (common point)	
TB-10	NO	Alarm connector output (normal open)	
TB-11	AC1	Auxiliary power source	Please refer to the stick for the auxiliary power and voltage.
TB-12	AC2		

Three-wire three-phase angle, Three-wire three-phase zero crossing (TP、ZZ)

Connector pin	Connector No.	Description	Notes
TB-01	•	Empty pin	Do not connect.
TB-02	M	+5VDC	Only for this control board, not for other use positive control signal input.
TB-03	+	Positive control signal input	The default setting is 4~20mA when the sticker is not marked.
TB-04	—	Standard analog signal voltage	
TB-05	E3	Connected to the VR 3rd pin of the outside potentiometer	Adjustable output 0~100%, Please eliminate the shorted copper wire between E3 and E2 when using the outside potentiometer with VR. (2~10KΩ)
TB-06	E2	Connected to the VR 2nd pin of the outside potentiometer	
TB-07	E1	Connected to the VR 1st pin of the outside potentiometer	
TB-08	NC	Alarm connector output (normal close)	227VAC2A. Connector capacity 125VAC2A. 30VAC2A.
TB-09	COM	Alarm connector output (common point)	
TB-10	NO	Alarm connector output (normal open)	
TB-11	AC1	Auxiliary power source	Please refer to the stick for the auxiliary power and voltage.
TB-12	AC2		

Applicable high-speed fuse for the power regulator

Wiring setup examples for single-phase, Single-phase zero crossing, and Two-wire three-phase zero crossing

Main circuit wiring diagram

- ※ When electromagnetic switch is used, please install it on the power source side.
- ※ For FS connector wiring, please refer to the right diagram.

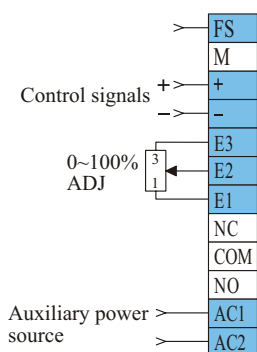

1. Control signal input

2. Manual control

3. Limited adjustment for control signal input, output

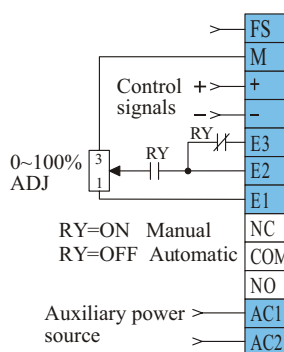

4. Dry contact signal input, outside VR adjustment

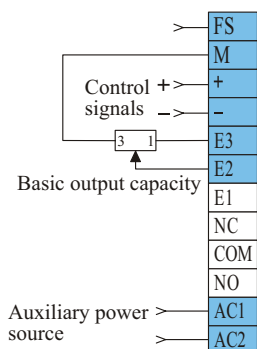

5. Manual-automatic relay switch, outside VR adjustment

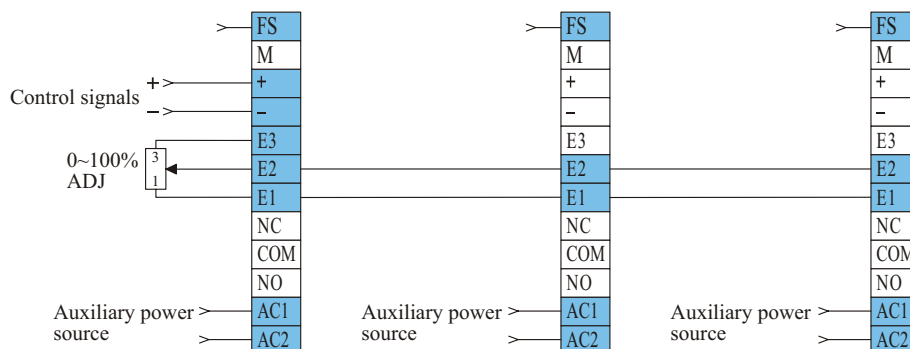

6. Manual-automatic relay switch

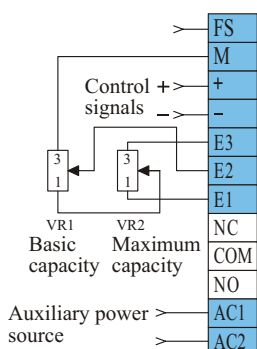

7. Control signal input, basic output setting

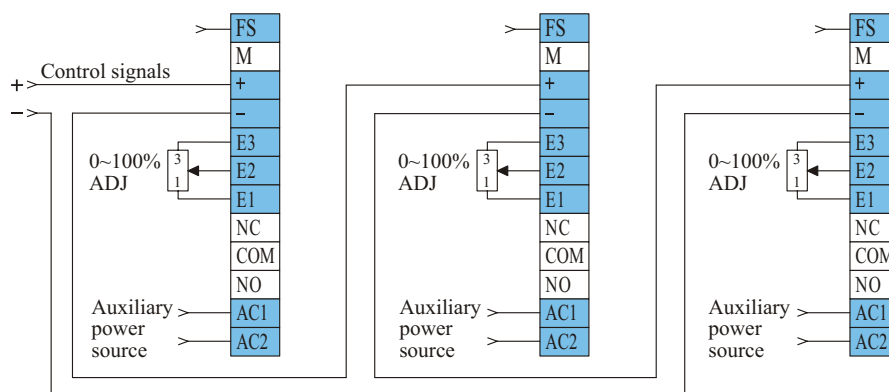

8. Multiple connection, only one for outside VR setting

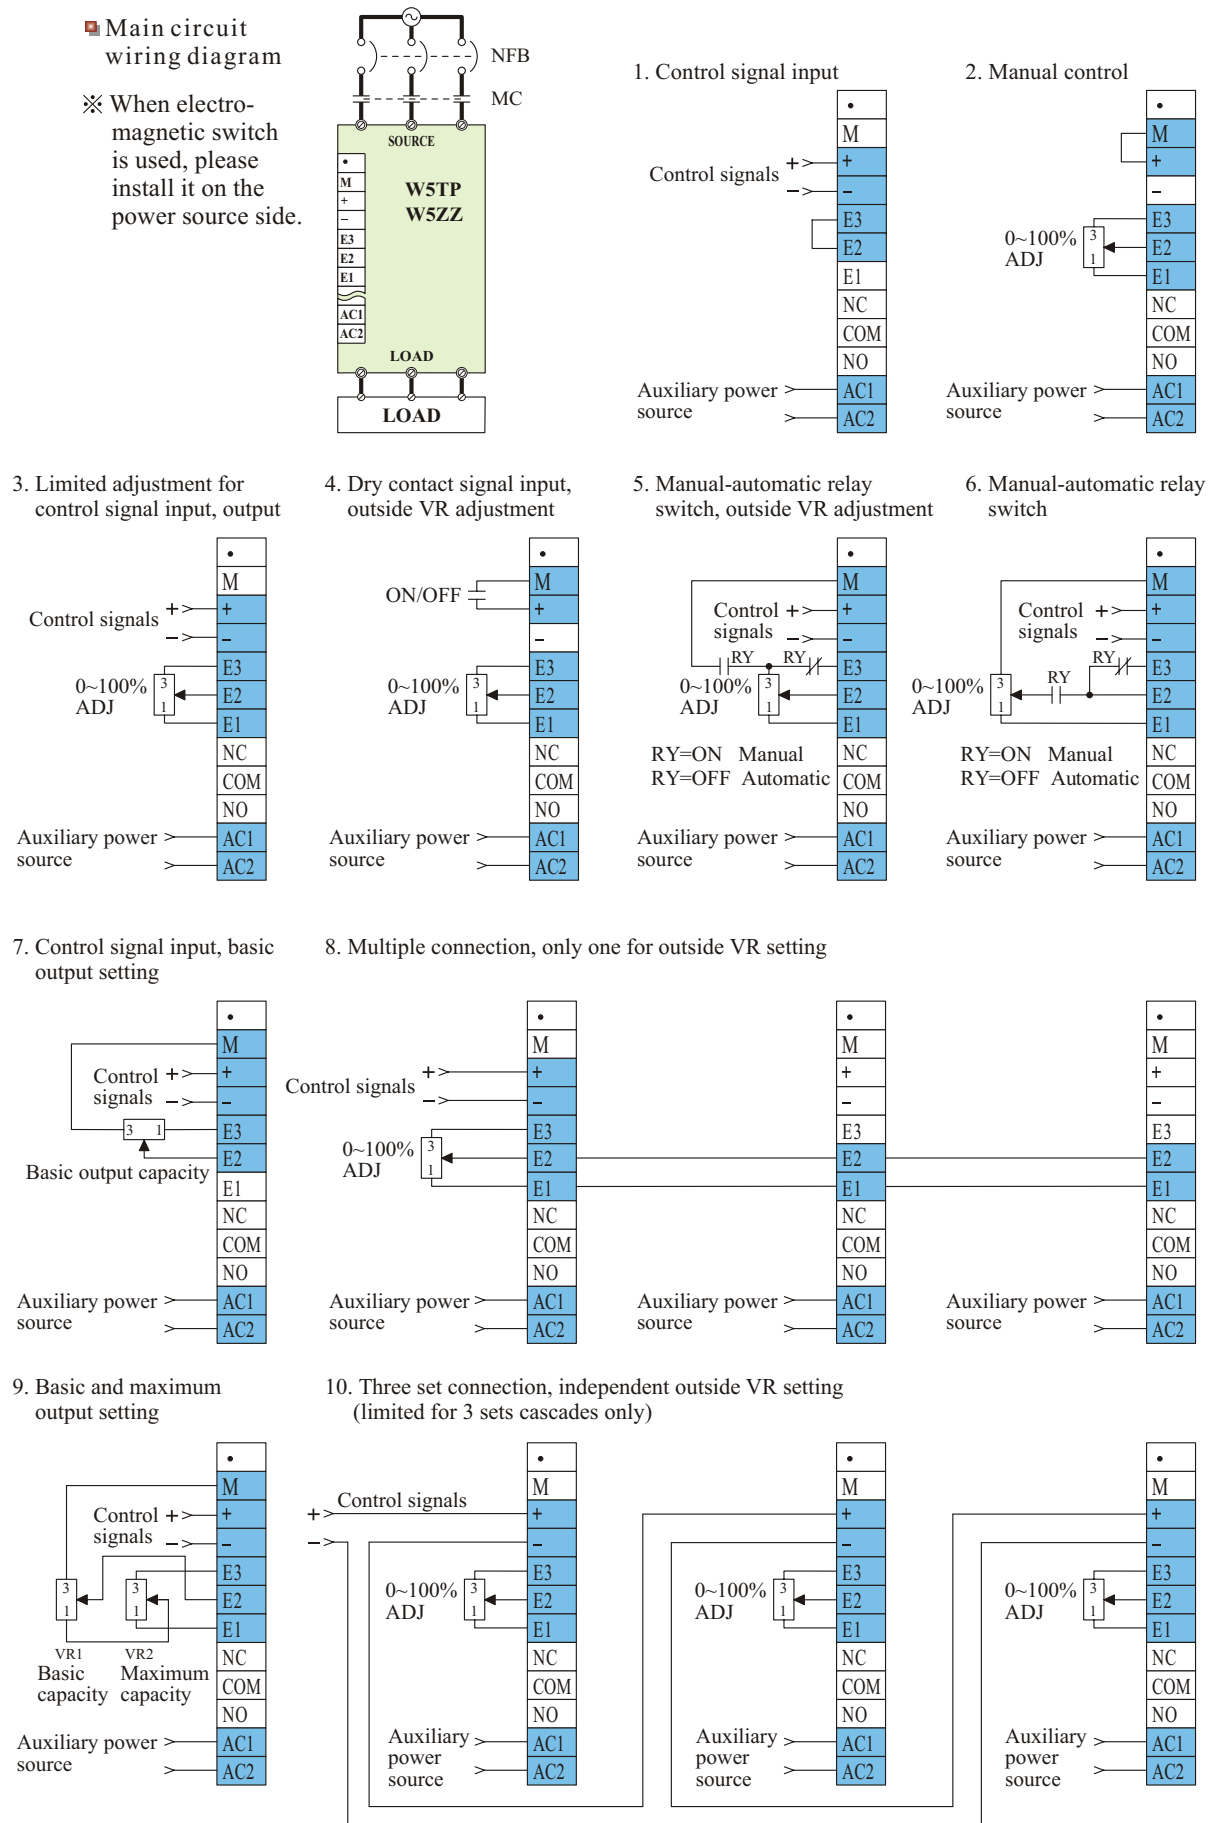

9. Basic and maximum output setting

10. Three set connection, independent outside VR setting (limited for 3 sets cascades only)

Wiring setup examples for and Three-wire three-phase angle and Three-wire three-phase zero crossing
